

The Abdomen

Muscles of the Abdominal Wall

- *Rectus abdominis*
- *External oblique*
- *Internal oblique*
- *Transversus abdominis*

The Descending Aorta

Abdominal Aorta & Branches

Unpaired arteries :

- **Celiac trunk**-liver, stomach, spleen; Branches-left gastric, splenic, & common hepatic arteries.
- **Superior mesenteric**-pancreas, small intestine, most of large intestine.
- **Inferior mesenteric**-terminal colon & rectum

Abdominal Aorta & Branches (cont'd)

Paired arteries:

- *Inferior phrenic*
- *Suprarenal*
- *Renal*
- *Gonadal*
- *Lumbar*

Mesenteries

- *Fused double sheets of peritoneal membrane; provides routes for blood vessels, lymphatics, and nerves.*
- *Organ reinforcement, prevent entanglement*
- *Lesser/greater omentum, mesocolon(transverse,sigmoid)*
- *Retropertitoneal(pancreas,large intestine); intraperitoneal(stomach)*

The Esophagus

- **Hollow, muscular tube:** 25 cm. long, 2 cm diameter
- **C6 to T7**
- **Angiology:** esophageal, thyrocervical trunk, external carotids, bronchials, celiac trunk & inferior phrenic artery
- **Innervation:** Vagus & esophageal plexus

The Esophagus (cont'd)

- Mucosal stratified epithelium
- Esophageal glands
- Superior 1/3 has skeletal muscles fibers, middle third has skeletal/smooth mixture; bottom third has smooth; visceral reflexes
- No serosa

The Stomach

- Stomach functions in: storage of ingested food, mechanical breakdown, and chemical digestion(chyme formation).
- T7-L3
- 15-25 cm long; empty(50ml), full(up to 4L).
- Rugae
- Cardia, body, fundus, lesser/greater curvatures
- Pylorus, sphincter.

The Stomach (cont'd)

- **Angiology:** left gastric (lesser curve & cardia), splenic(fundus & greater curve), common hepatic(lesser/greater curves of pylorus)
- **Innervation:** Thoracic splanchnic nerves(sympathetic fibers) from celiac plexus; parasympathetics supplied from vagus nerve
- **Musculature:** circular, longitudinal

The Small Intestine

- Body's major digestive organ
- 6m long, 4cm-2.5 cm diameter
- Accounts for 90% of nutrient absorption
- ***Plicae circulares***
- ***Three subdivisions:*** duodenum, jejunum, ileum

Small Intestine (cont'd)

- Duodenum is retroperitoneal; (L1-L4)
- Hepatopancreatic ampulla and sphincter, major duodenal papilla.
- Jejunum; 2.5 m long
- Ileum(peritoneal); 3.6m long; ends at valve

Large Intestine

- Frames small intestine on three sides and extends from ileocecal valve to anus
- 1.5m long
- ***Functions:***(1) resorption of water/electrolytes; compaction of feces(2)vitamin absorption(bacterial flora)

Large Intestine (cont'd)

- **Cecum, vermiform appendix**
- **Colon:** haustra, taenia coli, epiploic appendages
- **Colon regions:** Ascending > hepatic flexure > transverse > splenic flexure > descending > sigmoid flexure > sigmoid
- **Rectum:** Anal canal / columns, internal/external anal sphincter, anal orifice.

The Liver

- **Largest visceral organ**
- Functions: metabolic/hematological regulation, bile production.
- Falciform ligament, ligamentum teres, lobes (right, left, caudate, quadrate), porta hepatis
- Angiology: hepatic artery proper, portal vein

Gall Bladder

- **Stores/modifies bile**
- **Fundus, body, neck**
- **Cystic duct**

The Pancreas

- *Exo/endocrine gland*
- *Head, body, tail*
- *Retroperitoneal*
- *Pancreatic/accessory pancreatic duct*
- *Exocrine product-pancreatic juice*
- *Islets of Langerhans*

Veins Draining the Abdomen

- *Lumbar*
- *Gonadal*
- *Hepatic*
- *Renal*
- *Suprarenal*
- *Phrenic*

Hepatic Portal System

Tributaries

- *Inferior mesenteric*
 - *Splenic*
 - *Superior Mesenteric*
- * *Hepatic portal vein formed by fusion of superior mesenteric and splenic*

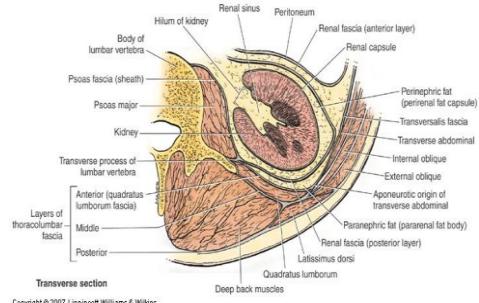

Posterior abdominal wall

- Kidneys
- Ureter
- Urinary bladder
- Urethra

Kidney Anatomy

Location & External Anatomy

- Retroperitoneal
- T12-L3
- 12cm long, 6cm wide, 3cm thick
- Convex lateral surface, concave medial surface (renal hilus)
- Renal capsule, adipose capsule
- Renal fascia

Kidney Anatomy

Internal Anatomy

- Renal Cortex
- Renal Medulla
- Medullary pyramids
- Renal columns
- Renal pelvis
- Major/minor calyces

Renal histology

- Minor/major calyces, renal pelvis, ureters, urinary bladder, proximal urethra comprised of transitional epithelium

Ureters

- Mucosa
- Longitudinal (inner)
- Circular (outer)
- Adventitia

Kidney Angiology

- Renal artery >segmental> interlobar > arcuate>interlobular>afferent arterioles> glomerulus>efferent arterioles>peritubular capillaries>vasa recta>venules>interlobular veins>arcuate veins>interlobar veins>renal vein

The Adrenal Glands

- Paired
- Cortex
- Medulla
- 3 zones

Abdominal innervation

- Splanchnic nerves (greater, lesser, least)
- Lumbar splanchnic
- Sacral splanchnic
