

MET 3502 Synoptic Meteorology

Lecture 3: Surface Weather Elements

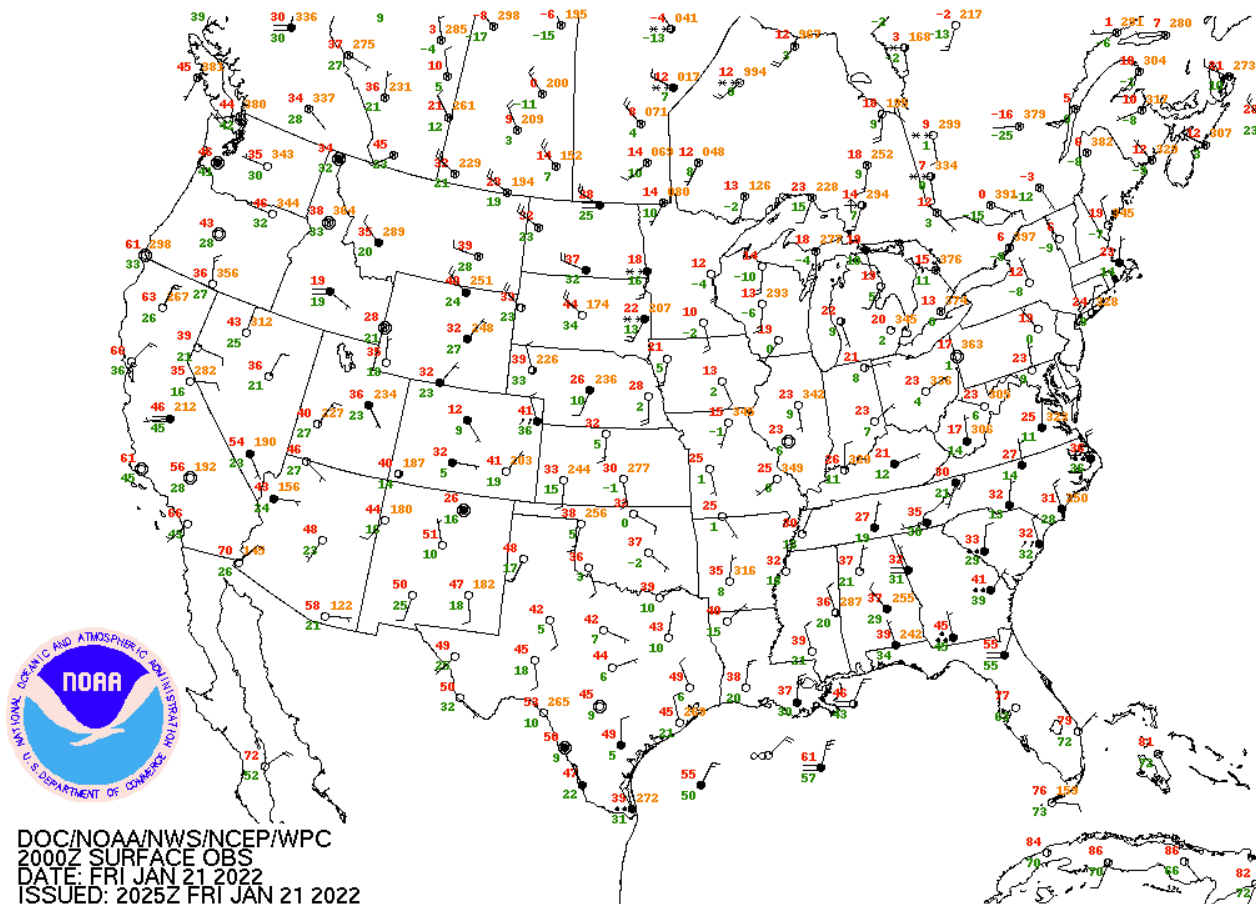

Surface Weather Elements

- Not observations *of* the surface, but
- Observations made by an observer (or instrument) *at* the surface
- Example: ASOS (Automated Surface Observing System), below

Example Hourly Surface Weather Map from NOAA WPC

- <https://www.wpc.ncep.noaa.gov/sfc/sfcobs/sfcobs.shtml> (NOAA weather prediction center, WPC)
- We need to learn how to read the surface station models plotted on the map

NOAA Office of the Federal Coordinator for Meteorology

Mission: To ensure the effective use of federal meteorological resources by leading the systematic coordination of operational weather requirements and services, and supporting research, among the federal agencies.

Federal Meteorological Handbook No. 1

--a 101 page PDF document (entitled “Surface Weather Observations and Reports”) describing the surface weather observing program of the U.S. National Weather Service.

https://www.icams-portal.gov/resources/ofcm/fmh/FMH1/fmh1_2019.pdf

NWS reporting change

On July 1, 1996 the National Weather Service changed from the SAO (Surface Airways Observations) to the METAR/SPECI code for reporting hourly observations of surface weather data.

METAR/SPECI Code

METAR , message d'observation
météorologique régulière pour l'aviation,
which is the French expression for
Aviation Routine Meteorological Report.

SPECI is derived from the French
expression for Aviation Selected Special
Meteorological Report.

The METAR Code

METAR or SPECI CCCCYYGGggZ AUTO or
COR dddff(f)Gf_mf_m(f_m)KT d_nd_nd_nVd_xd_xd_x
VVVVVSM [RD_RD_R/V_RV_RV_RV_R or
RD_RD_RV_NV_NV_NV_NVV_XV_XV_XV_XFT] w'w'
[N_sN_sN_sh_sh_sh_s or VVh_sh_sh_s or SKC/CLR]
T'T'/T'_dT'_dAP_HP_HP_HP_H RMK (Automated, Plain
Language) (Additive Data and Automated
Maintenance Indicators)

The Surface Station Model

Surface data contained in METAR reports are plotted in a specific organized pattern known as the **surface station model**.

The consistent organization of the station model makes it easier for the meteorologist analyzing a surface weather map to locate and to identify important information.

Sample Station Plot

Wind Speed and Direction

Wind speed and wind direction are plotted using a **wind arrow**.

The **wind direction** is plotted with the wind arrow indicating the direction of the wind **blowing into the station circle**.

Wind Speed

Wind Speed is indicated by the number of half barbs, whole barbs, and flags.

The wind speed is indicated by the sum of the wind speeds represent by the half barbs, whole barbs and flags.

Wind Direction

The top of the arrow is not usually plotted any more to save space.

indicates a wind from the **south** (i.e 180 degrees)

National Weather Service (NWS) uses the **compass coordinate system** to express wind direction

Compass Coordinate System

Polar Coordinate System

Wind Speed

A half bar indicates 5 knots.

Wind Speed (cont.)

A whole barb indicates 10 kts.

Wind Speed (cont.)

A flag indicates 50 knots.

Wind Speed (cont.)

Indicates a wind speed of $50+10+5 = 65$ knots.

Wind Bars

50 + 10 + 10 + 5

Wind blowing from the west at 75 knots

Wind blowing from the northeast at 25 knots

Wind blowing from the south at 5 knots

Calm winds

PRESSURE

- Sea-level pressure is plotted in tenths of millibars (mb), with the leading 10 or 9 omitted.
- Below are some sample conversions between plotted and complete sea-level pressure values: Add either a 10 or 9 in front based on which would bring the value closer to 1000. Sea-level pressure < 950 mb is rare (only in tropical cyclones) and METAR code is unable to distinguish 1049 mb & 949 mb. You'll need to decide according to conditions. However, over continental US, the lowest sea-level pressure recorded is > 950 mb. **So for METAR pressure code ≤ 500, usually you should add 10 in front; for METAR pressure code > 500, usually you should add 9 in front: :**

410: 1041.0 mb

103: 1010.3 mb

987: 998.7 mb

872: 987.2 mb

PRESSURE TREND

- **The pressure trend has two components, a number and symbol, to indicate how the sea-level pressure has changed during the past three hours. The number provides the 3-hour change in tenths of millibars (for example: -20 means pressure decreasing by 2.0 mb), while the symbol provides a graphic illustration of how this change occurred. Below are the meanings of the pressure trend symbols:**

Cartoons are intuitive, for example

Barometric Tendency

0: Rising, then falling

1: Rising then steady

2: Rising

3: Falling, then rising

4: Steady

5: Falling, then rising

6: Falling, then steady

7: Falling

8: Rising, then falling

WEATHER

- **A weather symbol is plotted if at the time of observation, there is either precipitation occurring or a condition causing reduced visibility. Below is a list of the most common weather symbols:**

Selected Current Weather That Affects Visibility

04: Smoke

05: Haze

10: MIST

30: Sand or dust storm

36: Drifting snow (below eye level)

38: Drifting snow (above eye level)

45: FOG, sky obscured

Precipitation

- 60: Intermittent, slight RAIN
 - 61: Continuous, slight RAIN
 - 62: Intermittent, moderate RAIN
 - 63: Continuous, moderate RAIN
 - 64: Intermittent, heavy RAIN
 - 65: Continuous, heavy RAIN
 - 50: Intermittent, slight DRIZZLE (Works like rain)
 - * 70: Intermittent, slight SNOW (Works like rain)
- 
- 80: Rain SHOWER
 - 85: Snow SHOWER
 - 17: Lightning, but no precipitation, unless combined with rain, snow, etc, symbols

Most common symbols

			Rain (light, moderate, heavy)
			Snow (light, moderate, heavy)
			Thunder (with rain, snow, no precipitation)
			Shower (rain, snow)
			Drizzle
			Freezing rain, Freezing drizzle
			Ice pellets/Sleet
			Fog (shallow, deep)
			Haze

All Weather Symbols Present Weather Symbols

00  Cloud development NOT observed during past hour (not plotted)	01  Clouds generally becoming less developed (not plotted)	02  State of sky on the whole unchanged during past hour (not plotted)	03  Clouds generally forming or developing during past hour (not plotted)	04  Visibility reduced by smoke	05  Haze	06  Widespread dust in the air, not raised by wind at or near station	07  Dust or sand due to wind at or near the station but no dust whirl/sandstorm	08  Well developed dust whirl and/or sand whirl but no dust storm/sandstorm	09  Dust storm or sandstorm within sight or at the station during past hour
10  Mist	11  Patches of shallow fog at station, NOT deeper than 6 feet on land	12  More or less continuous shallow fog at station, NOT deeper than 6 feet	13  Lighting visible, no thunder heard	14  Precipitation within sight, but NOT reaching the ground	15  Precipitation within sight, reaching the surface, but more than 3 miles away	16  Precipitation within sight, reaching the surface within 3 miles	17  Thunder heard, but no precipitation at the station	18  Squall(s) within sight during past hour	19  Funnel cloud(s) and/or Tornado(es) during the preceding hour
20  Drizzle (not freezing) or snow grains, not as shower(s), has ended	21  Rain (not freezing) not falling as shower(s), ended in the past hour	22  Snow not falling as shower(s) ended in the past hour	23  Rain and snow or ice pellets, not as shower(s) ended in the past hour	24  Freezing drizzle or freezing rain, not as shower(s) ended in the past hour	25  Shower(s) of rain ended in the past hour	26  Shower(s) of snow, or of rain and snow ended in the past hour	27  Shower(s) of hail, or of rain and hail ended in the past hour	28  Fog or ice fog ended in the past hour	29  Thunderstorm (with or without precipitation) ended in the past hour
30  Slight or moderate dust storm or sandstorm (has decreased in past hour)	31  Slight or moderate dust storm/sandstorm (no change during past hour)	32  Slight or moderate dust storm or sandstorm (has begun or increased)	33  Severe dust storm or sandstorm, decreased during the past hour	34  Severe dust storm or sandstorm, has no change during past hour	35  Severe dust storm or sandstorm has begun or increased	36  Slight or moderate drifting snow (generally below eye level)	37  Heavy drifting snow (generally below eye level)	38  Slight or moderate blowing snow (generally above eye level)	39  Heavy blowing snow (generally above eye level)
40  Fog at a distance, but not at the station during the preceding hour	41  Fog in patches	42  Fog, sky visible (has become thinner during preceding hour)	43  Fog, sky obscured (has become thinner during preceding hour)	44  Fog, sky visible (no appreciable change during the past hour)	45  Fog, sky obscured (no appreciable change during the past hour)	46  Fog, sky visible (has begun or has become thicker during past hour)	47  Fog, sky obscured (has begun or has become thicker during past hour)	48  Fog, depositing rime ice, sky visible	49  Fog, depositing rime ice, or ice fog, sky obscured
50  Drizzle, not freezing, intermittent (slight at time of observation)	51  Drizzle, not freezing, continuous (slight at time of observation)	52  Drizzle, not freezing, intermittent (moderate at time of observation)	53  Drizzle, not freezing, continuous (moderate at time of observation)	54  Drizzle, not freezing, intermittent (heavy at time of observation)	55  Drizzle, not freezing, continuous (heavy at time of observation)	56  Drizzle, freezing, slight	57  Drizzle, freezing, moderate or heavy	58  Drizzle and rain, slight	59  Drizzle and rain, moderate or heavy
60  Rain, not freezing, intermittent (slight at time of observation)	61  Rain, not freezing, continuous (slight at time of observation)	62  Rain, not freezing, intermittent (moderate at time of observation)	63  Rain, not freezing, continuous (moderate at time of observation)	64  Rain, not freezing, intermittent (heavy at time of observation)	65  Rain, not freezing, continuous (heavy at time of observation)	66  Rain, freezing, slight	67  Rain, freezing, moderate or heavy	68  Rain or drizzle and snow, slight	69  Rain or drizzle and snow, moderate or heavy
70  Intermittent fall of snowflakes (slight at time of observation)	71  Continuous fall of snowflakes (slight at time of observation)	72  Intermittent fall of snowflakes (moderate at time of observation)	73  Continuous fall of snowflakes (moderate at time of observation)	74  Intermittent fall of snowflakes (heavy at time of observation)	75  Continuous fall of snowflakes (heavy at time of observation)	76  Ice needles (with or without fog)	77  Snow grains (with or without fog)	78  Isolated star-like snow crystals (with or without fog)	79  Ice pellets (sleet)
80  Rain shower(s), slight	81  Rain shower(s), moderate or heavy	82  Rain shower(s), violent	83  Shower(s) of rain and snow mixed, slight	84  Shower(s) of rain and snow mixed, moderate or heavy	85  Snow shower(s), slight	86  Snow shower(s), moderate or heavy	87  Shower(s) of snow pellets or small hail, slight with or without rain or rain/snow	88  Shower(s) of snow pellets or small hail, moderate or heavy w/ or w/o rain/snow	89  Shower(s) of hail, slight, w/ or w/o rain or rain/snow mixed, no thunder
90  Shower(s) of hail, w/ or w/o rain or rain/snow, no thunder, mod. or heavy	91  Thunderstorm during past hour w/ slight rain at time of observation	92  Thunderstorm during past hour w/ current moderate/heavy rain	93  Thunderstorm ended w/ current slight snow, rain/snow mixed, or hail	94  Thunderstorm ended w/ current moderate/heavy snow, rain/snow, or hail	95  Thunderstorm, slight or moderate, w/o hail but w/ rain and/or snow	96  Thunderstorm, slight or moderate, with hail at time of observation	97  Thunderstorm, heavy, w/o hail but with rain and/or snow	98  Thunderstorm combined with dust storm or sandstorm	99  Thunderstorm, heavy, with hail at time of observation

SKY COVER

- The amount that the circle at the center of the station plot is filled in reflects the approximate amount that the sky is covered with clouds.

Clear

Scattered clouds
(approximately 25% cloud cover)

Partly cloudy
(approximately 50% cloud cover)

Mostly cloudy
(approximately 75% cloud cover)

Overcast

Sky Obscured

Sky Cover Missing

Surface Station Model

TT & TD are in °F (US)
PP is in mb and tenths

FIU Cloud Atlas

FIU CLOUD ATLAS 2006

Names link to cloud type descriptions. Pictures link to photo galleries.

High Clouds

Cloud base:
Tropics, 6-18 km
Mid Lat, 5-13 km
Polar, 3-8 km

[Cirrostratus](#)

[Cirrocumulus](#)

[Cirrus](#)

Clouds of Vertical Development
[Cumulonimbus](#)

Middle Clouds

Cloud base:
Tropics, 2-8 km
Mid Lat, 2-7 km
Polar, 2-4 km

[Altostratus](#)

[Altostratus](#)

Low Clouds

Cloud base below
2 km in all
latitudes

[Stratus](#)

[Stratocumulus](#)

[Nimbostratus](#)

[Cumulus](#)

Low Clouds:

Typical Types: Stratus (St), Stratocumulus (Sc), Cumulus (Cu), Cumulonimbus (Cb)

Low Clouds: cloud bases Up to 6,500 ft (0-2km)

L1: Cumulus
Cumulus of fair weather with flattened appearance

L2: Cumulus
Moderate/strong vertical extent, or towering cumulus

L3: Cumulonimbus
Tops not fibrous, outline not completely sharp, no anvil

L4: Stratocumulus
From the spreading and flattening of cumulus

L5: Stratocumulus
Not from the spreading and flattening of cumulus

L6: Stratus
In a continuous layer and/or ragged shreds

L7: Stratus Fractus and/or Cumulus Fractus
occurs with rain or snow

L8: Cumulus & Stratocumulus
Not spreading, bases at different levels

L9: Cumulonimbus
With fibrous top, often with an anvil

Bases below 2 km

Low Clouds

L1: Fair weather Cumulus

L2: Towering Cumulus

L3: Cumulonimbus without an anvil

L5: Stratocumulus

L6: Stratus

L7: Stratus fractus of bad weather (scud)

L9: Cumulonimbus with an anvil

Bases below 2 km

Middle Clouds:

Typical Types: Altostratus (As), Altopcumulus (Ac), Nimbostratus (Ns)

Middle Clouds: cloud bases 6,500 - 23,000ft (2-7km)

M1: Altostratus
Mostly semi-transparent, sun or moon may be dimly visible

M2: Altostratus or Nimbostratus
Dense enough to hide the sun or moon

M3: Altopcumulus
Semi-transparent, one level, cloud elements change slowly

M4: Altopcumulus
Lens-shaped, or continually changing shape and size

M5: Altopcumulus
One or more bands or layers, expanding, thickening

M6: Altopcumulus
From the spreading of cumulus or cumulonimbus

M7: Altopcumulus
One or more opaque layers, w/ altostratus or nimbostratus

M8: Altopcumulus
With cumulus-like tufts or turrets

M9: Altopcumulus
Chaotic sky, cloud bases at several levels

Bases 2-7 km

Middle Clouds

M1: Thin Altostratus

M2: Thick Altostratus OR Nimbostratus

M3: Thin Altocumulus

M4: Thin Altocumulus in patches

M5: Increasing thin Altocumulus

M7: Thick Altocumulus, not increasing

M9: Altocumulus of a chaotic sky

Bases 2-7 km

High Clouds:

Typical Types: Cirrus (Ci), Cirrostratus (Cs), Cirrocumulus (Cc)

High Clouds: cloud bases 16,000 - 50,000ft (5-15km)

<http://www.weather.gov/os/brochures/clo>

H1: Cirrus
In the form of filaments, strands, or hooks

H2: Cirrus
Dense, in patches or sheaves, not increasing, or with tufts

H3: Cirrus
Often anvil shaped remains of a cumulonimbus

H4: Cirrus
In hooks or filaments, increasing, becoming denser

H5: Cirrostratus
Cirrus bands, increasing, below 45° elevation

H6: Cirrostratus
Cirrus bands, increasing, veil above 45° elevation

H7: Cirrostratus
Translucent, completely covering the sky

H8: Cirrostratus
Not increasing, not covering the whole sky

H9: Cirrocumulus
Alone or with some cirrus or cirrostratus

High Clouds

H1: Scattered Cirrus, not increasing

H2: Dense Cirrus, not increasing

H3: Cirrus formed by spreading Cumulonimbus anvils

H4: Increasing Cirrus

H5: Increasing Cirrostratus, not covering entire sky

H7: Cirrostratus veil covering entire sky

H8: Cirrostratus, not increasing and not covering entire sky

H9: Cirrocumulus

Bases 5-13 km

More Clouds

Shelf Cloud

Represents the leading edge of strong winds in advance of a thunderstorm

Wave Cloud

Formed by strong horizontal winds over uneven terrain

Mammatus

Drooping underside of heavy, rain-saturated clouds

Tornado

Rapidly rotating column under a cumulonimbus cloud that touches the ground

Wall Cloud

Lowering of the rain free base of a thunderstorm, often prior to tornado formation

A surface station interpreted

- Sky 7/8 Cloudy
- T & TD: 77 and 71°F
- Pressure: 999.8 mb
- Visibility 5 mi
- Present weather: RAIN Showers
- Barometer steady then falling by 0.3 mb
- Low Clouds: Towering Cumulus
- Middle Clouds: Thin Altocumulus
- High Clouds: Cirrus
- Past Weather: Showers
- Low cloud base: 2000 ft

- Please practice by yourself by describing all the weather elements displayed in the plot in this and the next 8 slides (slide#40-48), similar to the example given in slide #39.
- You should describe the following weather elements: Sky cover, T & TD, Pressure, Visibility, Present weather, pressure trend, Low, Middle, & High Clouds, Past Weather & Low cloud base.
- You can omit elements not plotted.

Weather summary of all previous plots

- This is an event of frontal cyclone passage of a station. The state experienced warm front first, then behind the warm front, in front of a cold front, and cold front passage. Changes in winds, temperature, dew point, weather and cloud covers indicate this event.

Surface Fronts and Boundaries

- **Cold Front** - a zone separating two air masses, of which the cooler, denser mass is advancing and replacing the warmer.

Warm Front

- **Warm Front** - a transition zone between a mass of warm air and the cold air it is replacing.

Stationary Front

- **Stationary Front** - a front between warm and cold air masses that is moving very slowly or not at all.

Occluded Front

- **Occluded Front** - a composite of two fronts, formed as a cold front overtakes a warm or quasi-stationary front. Two types of occlusions can form depending on the relative coldness of the air behind the cold front to the air ahead of the warm or stationary front. A cold occlusion results when the coldest air is behind the cold front and a warm occlusion results when the coldest air is ahead of the warm front.

Trough

- **Trough** - an elongated area of relatively low atmospheric pressure; the opposite of a ridge. On WPC's surface analyses, this feature is also used to depict outflow boundaries.

Squall Line

- Squall Line - a line of active thunderstorms, either continuous or with breaks, including contiguous precipitation areas resulting from the existence of the thunderst

Dry Line

- Dry Line - a boundary separating moist and dry air masses. It typically lies north-south across the central and southern high Plains states during the spring and early summer, where it separates moist air from the Gulf of Mexico (to the east) and dry desert air from the southwestern states (to the west).

Tropical Wave

- Tropical Wave - a trough or cyclonic curvature maximum in the trade wind easterlies.

Hash marks

- Hash marks: A hash mark denotes a change in frontal type, as in the example below. The hash mark will always be drawn perpendicular to the boundaries. They are not drawn at "triple points" (the intersection of an occluded, cold and warm or stationary front) and where a low pressure center separates the different frontal types.

Depiction of frontogenesis and frontolysis

- Frontogenesis refers to the initial formation of a surface front or frontal zone, while frontolysis is the dissipation or weakening of a front. Frontogenesis is depicted on HPC's surface analysis and forecast charts as a dashed line with the graphical representation of the developing frontal type (the blue triangle for cold fronts, the red semicircle for warm fronts, etc...) drawn on **each** segment. For example, the image below shows a forming cold front.

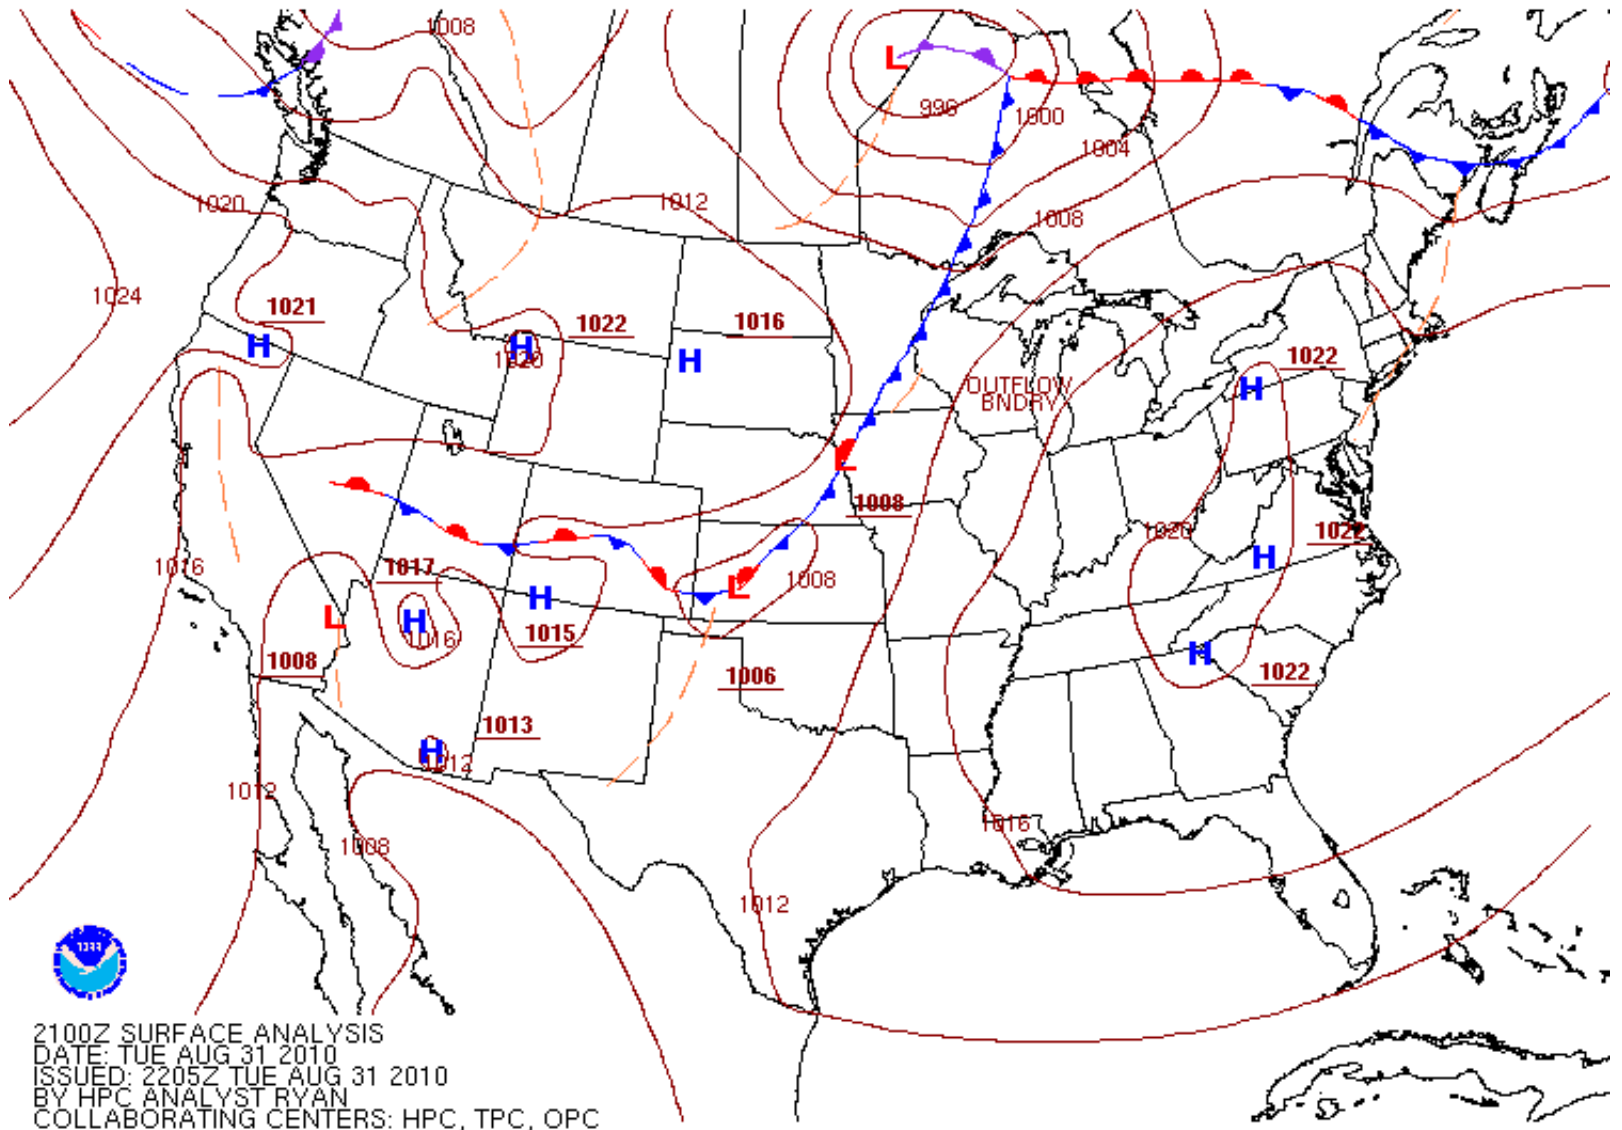

Frontolysis

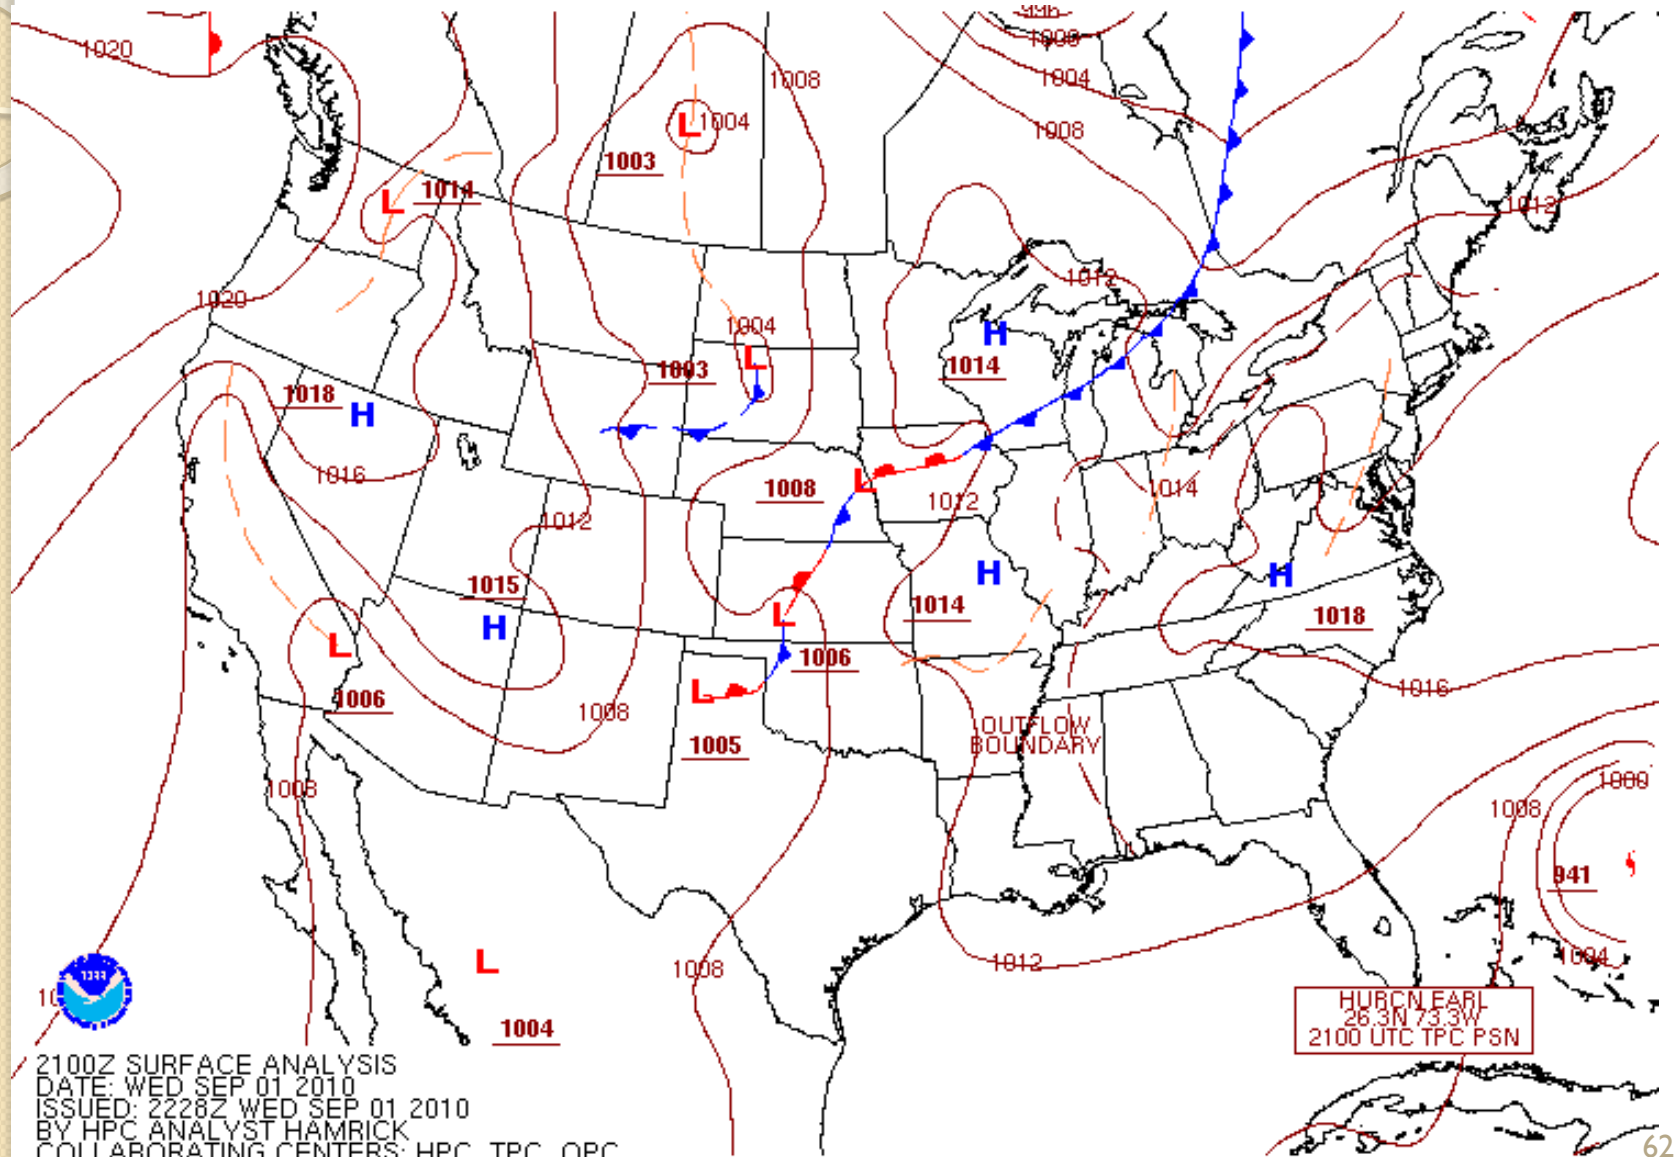

- Frontolysis is depicted as a dashed line with the graphical representation of the weakening frontal type drawn on every **other** segment. Below is an example of a dissipating warm front.
