## Part II

6. Solve the equation.

 $\log_2(x+3) + \log_2(x+4) = 1$ 

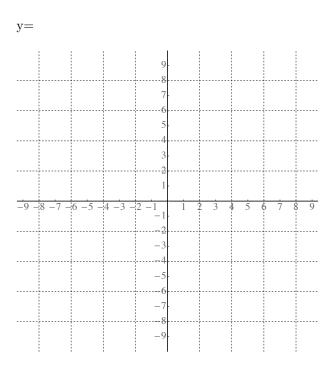

7. Solve the equation.

 $3 + e^{2x-1} = 5$ 

- 8. Graph  $y = 4\log_3(x+1) + 1$  using transformations. Start with the graph of a basic function **plot accurately as least three points** and use them to perform transformations. Do one transformation at a time. Name the transformation and write the equation of the resulting function. Draw asymptotes.
