Chapter 3: Listening and Critical Thinking

What is Listening?

Effective Listening Habits

What is Critical Thinking?

Effective Critical Thinking Habits

Speaker and Audience Responsibilities

What Is Listening?

Listening is the ability to ...

- understand, analyze, respect, appreciate
- appropriately respond to the meaning of another person's spoken and nonverbal messages.

Time Spent Communicating

How Well Do You Listen?

- Most people cannot accurately report 50% percent of a spoken message.
- Without training, most people listen at only 25% efficiency.
- Listeners often distort or misunderstand the intended meaning of spoken messages.

Types of Listening

- **Discriminative:** Distinguish a language's sounds, words, and nonverbal cues
- **Comprehensive:** Accurately understand the *meaning* of spoken and nonverbal messages
- **Empathic:** Relate to a person's situation, feelings, or motives
- **Analytical:** Evaluate whether a message is reasonable
- **Appreciative:** Value how a person thinks and speaks

Multiple Choice Question

Which type of listening answers the question: *What does the speaker mean?*

- a. discriminative listening
- b. comprehensive listening
- c. empathic listening
- d. analytical listening
- e. appreciative listening

Basic Listening Principles

- **Use Your Extra Thought Speed**
 - Identify and summarize key points
 - Pay attention to nonverbal behavior
 - Analyze the speaker's arguments
 - Assess the presentation's relevance
- **Apply the Golden Listening Rule**
 - Listen to others as you would have them listen to you!

Speech vs. Thought Speed

- People talk at 125–180 words per minute
- People think at 400 words per minute
- Thought speed is the speed at which most people can think compared to the speed at which they can speak
- What do *you* do with this excess time?

The Seven Habits of Effective Listeners

1. Overcome distractions
2. Listen for big ideas
3. “Listen” to nonverbal behavior
4. Make it personal
5. Paraphrase
6. Listen before you leap
7. Ask a question

The Art of Paraphrasing

- The ability to restate what people say in a way that indicates you understand them
- A form of feedback that asks “Am I right? Is this what you mean?”
- Matches the content, depth, meaning, and language of a member’s message

Male-Female Listening

- **Men** are more likely to be comprehensive and analytical listeners. Men tend to hear facts.
- **Women** are more likely to be empathic and appreciative listeners. Women are usually more aware of the mood of communication.

Deborah Tannen, *You Just Don't Understand*

What Is Critical Thinking?

- Critical Thinking is the kind of thinking you use to analyze what you read, see, or hear to arrive at a justified conclusion or decision.
- Effective critical thinking always has an outcome such as a conclusion, decision, opinion, or behavior.

The Toulmin Model of Argumentation

- The **Toulmin** method is an informal method of reasoning. Created by the British philosopher Stephen **Toulmin**, it involves the data, claim, and warrant of an **argument**. These three parts of the **argument** are all necessary to support a good **argument**.

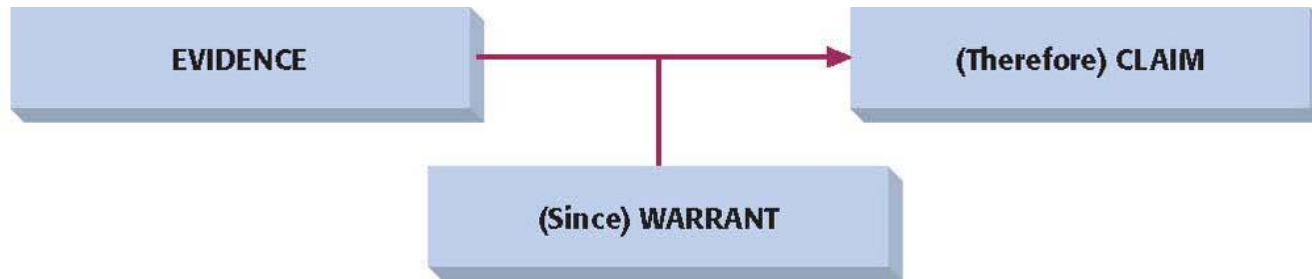

Toulmin's Model of Argument

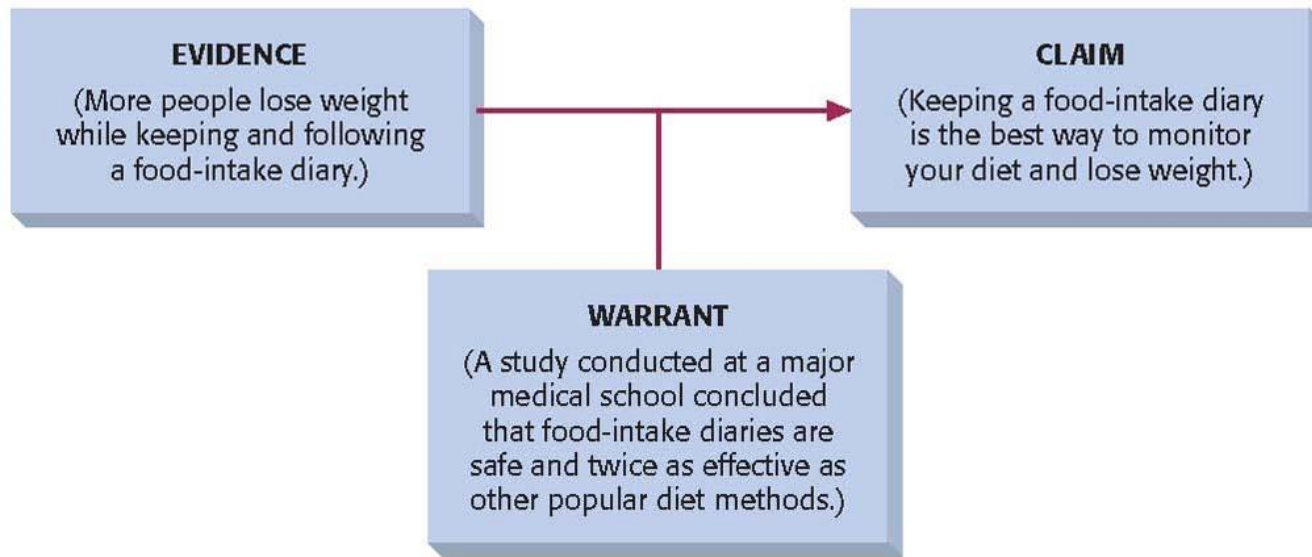

Three Basic Elements

- Claim – the conclusion or position you are advocating
- Data – the evidence you use to support the claim
- Warrant – your explanation of how the data support and prove the claim

Toulmin's Model of an Argument

EXAMPLE

Clarify Your Claims

- **Claims of Fact**

State that something is true, that an event occurred, that a cause can be identified, or that a theory explains a phenomenon

CLAIMS OF FACT

Claim of fact: Must be able to be proven absolutely true.

CLAIMS OF FACT

- Did it happen?
- Is it True?
- How do we know this?

>Polar bears are on the verge of extinction due to melting ice caps.

Clarify Your Claims

- Claims of Value

Assert that something is worthwhile – good or bad, right or wrong, best or worst

Example: Claim of value

- Military boot camp is a degrading and humiliating experience.
- It is immoral to participate in voluntary suicide.
- The hunting of animals is a barbaric practice.

Clarify Your Claims

- **Claims of Conjecture**
Suggests that something will or will not happen in the future

- **Claims of Policy**

Recommend a particular course of action or systematic procedure to solve a problem

Example: Claim of policy

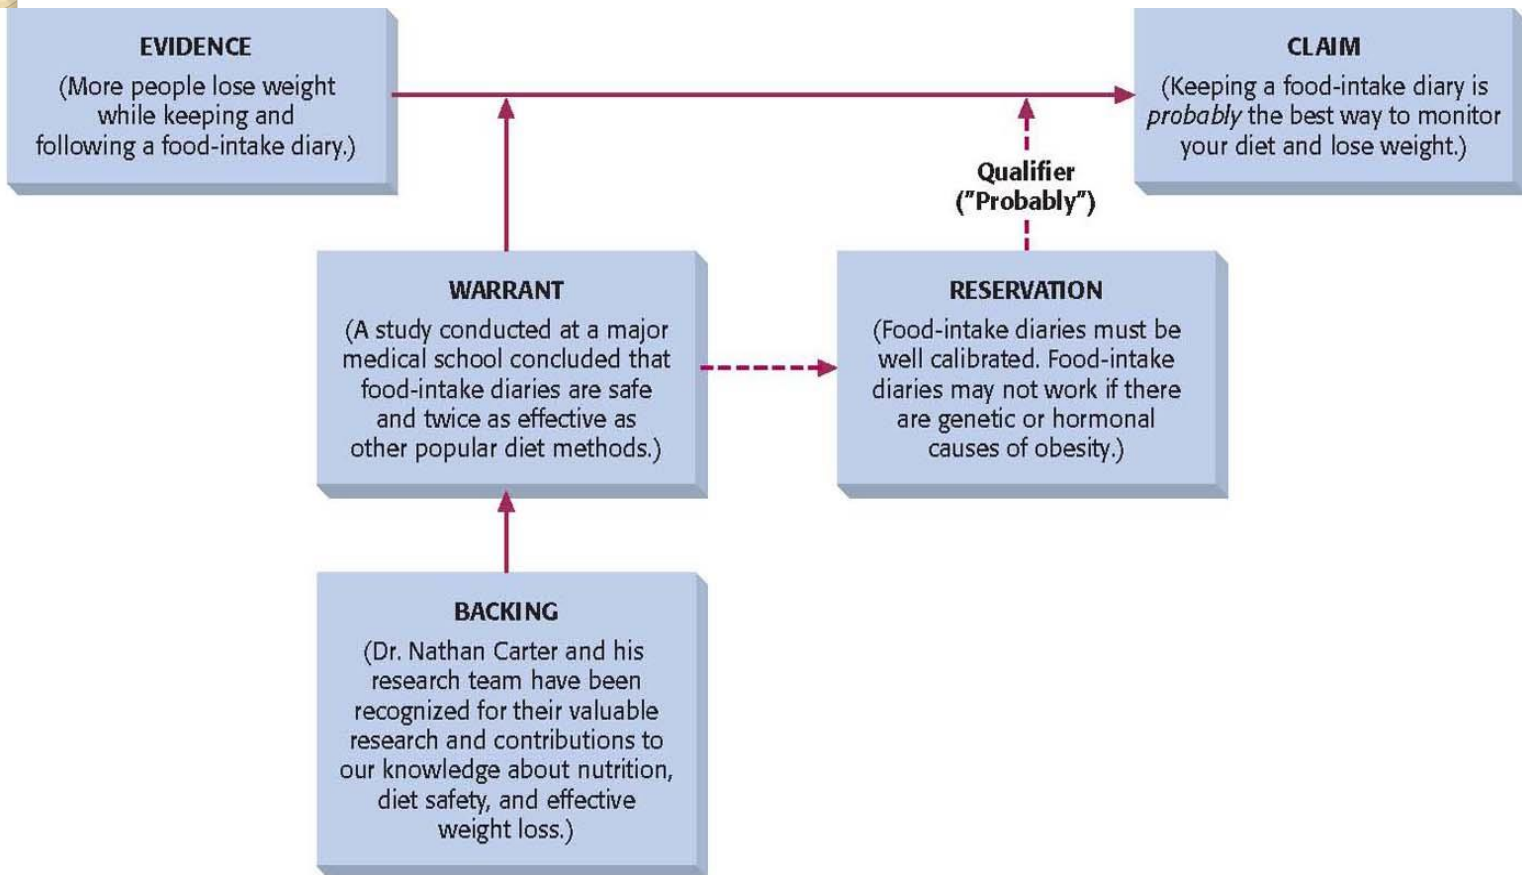

- The death penalty should be abolished because it does nothing to prevent murder.
- Legislation should be passed to stop the sale of cigarettes.
- The age at which people can get a driver's license must be raised to 18.

Toulmin's Model of Argument

Three Additional Elements

- Backing – provides support for the argument's warrant
- Reservation – recognizes exceptions to an argument; indicates that a claim may not be true under certain circumstances
- Qualifier – states the degree to which the claim appears to be true

The Complete Toulmin Model of an Argument

Matching Question

- A. Claim ___ Under what circumstances might the claim not be warranted?
- B. Data ___ How does the evidence lead to the claim?
- C. Warrant ___ What is the conclusion?
- D. Backing ___ Are the warrant and evidence valid?
- E. Reservation ___ With how much certainty can the claim be made?
- F. Qualifier ___ What evidence supports the claim?

Facts and Inferences

- **Fact:** A statement that can be proven true or false. *Example: Abraham Lincoln was a U.S. President.*
- **Inference:** A conclusion or opinion based on facts. *Example: Abraham Lincoln is the greatest of all United States Presidents.*

Fact or Inference?

A businessman had just turned off the lights in the store when a man appeared and demanded money. The owner opened a cash register. The contents of the cash register were scooped up, and the man sped away. A member of the police force was notified promptly.

1. Someone opened the cash register.
2. The robber was a man.
3. The man who appeared did not demand money.

Four Habits of Critical Thinkers

- Rethink your purpose
- Think like your audience
- Test your thinking on others
- Avoid wishful thinking

What Kind of Thinking Do You Do Best?

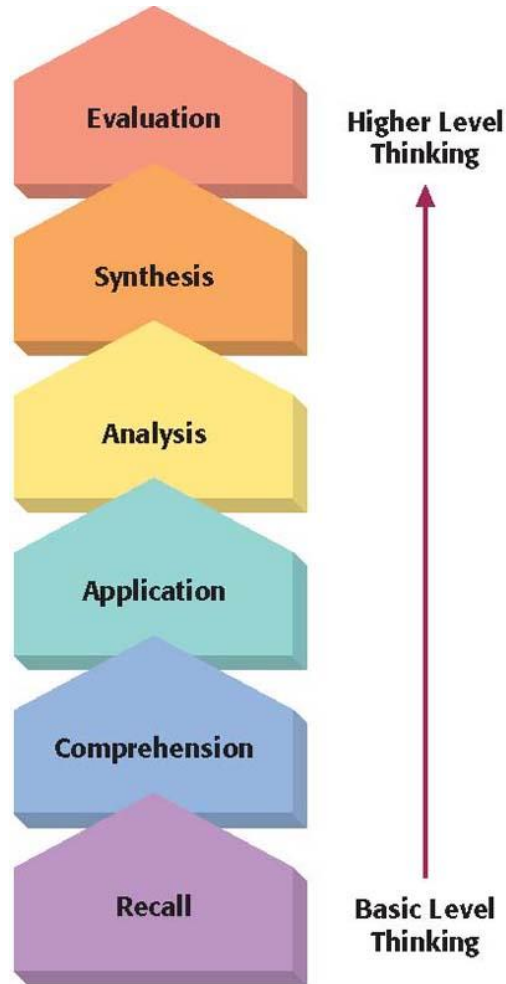

- Analyze ideas and opinions?
- Synthesize existing ideas to create new ones?
- Apply knowledge to solve problems?
- Recall dates, names, events, places, ideas?
- Evaluate or critique theories and strategies?
- Interpret and explain facts?

Benjamin Bloom

- An American educational psychologist who made contributions to the classification of educational objectives and to the theory of mastery learning

Bloom's Taxonomy of Thinking

Match the Type of Thinking

- A. Recall ___ Analyze ideas/opinions
- B. Comprehension ___ Synthesize old ideas to create new one
- C. Application ___ Remember dates, names, events, places, ideas
- D. Analysis ___ Apply knowledge to solving problems
- E. Synthesis ___ Evaluate or critique theories and strategies
- F. Evaluation ___ Interpret/explain facts

Match the Type of Question

- A. Recall ___ True or False: Most people speak at 125-150 words per minute.
- B. Comprehension
- C. Application ___ Compare and contrast facts and inferences.
- D. Analysis
- E. Synthesis ___ Explain how you would follow the critical thinking habit: Avoid Wishful Thinking.
- F. Evaluation ___ Define “thought speech.”

Examples of Bloom's Taxonomy
