ECO 4401: INTRODUCTION TO MATHEMATICAL ECONOMICS
FALL SEMESTER 2014

Instructor: Dr. Joel D. Carton
Office: DM 313B
Phone: 305-348-2682
E-mail: joel.carton@fiu.edu
Webpage: http://www2.fiu.edu/~cartonj
T.A. Amin Shoja

OFFICE HOURS AND APPOINTMENTS:

I will hold drop in office hours on Monday and Wednesday evenings from 5:00 – 7:00. In addition, I will be available for appointments as the need arises. To insure availability, appointments should be made with at least 24 hours advance notice.

My teaching assistant, Amin Shoja, will be available Monday and Wednesday mornings from 8:30 – 11:00 in the Economics Tutoring Center (VH 136).

TEXTBOOK:

The required textbook for the course is Fundamental Methods of Mathematical Economics, 4th edition (2005) by Alpha C. Chiang and Kevin Wainwright, published by McGraw-Hill Irwin. Other useful references for additional explanation and exercises are

- Mathematics for Economists (1994) by Carl Simon and Lawrence Blume (W. W. Norton and Company)

PREREQUISITES:

Students should have completed ECO 3101, ECO 3203, and a course in Calculus (MAC 2233 or MAC 2311) with a C or better before enrolling in this course.
COURSE CONTENT:

The purpose of this course is to introduce students to the mathematical tools commonly used by economists to rigorously describe and analyze the predictions made by the models that they use. To that end, the course examines a variety of classic problems from economic theory, and develops the mathematical methods required to solve those problems.

Although I reserve the right to make modifications as I see fit, my tentative plan is to cover the following topics in order:

- Equilibrium analysis (ch. 3)
- Row reduction and row echelon forms (ch. 5, course links)
- Vectors and vector equations (ch. 4)
- Linear independence (ch. 4)
- Matrix operations (ch. 4)
- Linear systems and $A\mathbf{x} = \mathbf{b}$ (ch. 4)
- Determinants (ch. 5)
- Finding the inverse of a matrix (ch. 5)
- Cramer’s rule (ch. 5)
- Eigenvalues and eigenvectors (ch. 11)
- Markov chains (ch. 4)
- Derivatives of univariate functions (chs. 6,7)
- Comparative statics (chs. 7, 8)
- Partial derivatives of multivariate functions (ch. 7)
- Total differentials (ch. 7)
Differentiating implicit functions (ch. 8)

Unconstrained optimization (chs. 9, 11)

Critical points of an objective function (chs. 9, 11)

Second derivatives (ch. 9)

Second order conditions for local extreme values (chs. 9, 11)

Concave and convex functions (chs. 9, 11)

Hessian matrices (ch. 11)

Definite symmetric matrices (ch. 11)

Optimization with equality constraints (ch. 12)

Lagrangian functions (ch. 12)

Bordered Hessians (ch. 12)

ATTENDANCE POLICY:

I highly recommend that students attend all lectures. When you skip lectures regularly, you only make the class more difficult for yourself. However, attendance will not directly figure into the calculation of grades for the course.

GRADING:

Grades will be based on six homework assignments and three exams including two midterms and a comprehensive final exam. In particular, a student’s overall numerical score for the course will be a weighted average of his/her average homework score, average midterm score, and final exam score. The average homework score will receive a weight of .3 in the overall grade. Of the midterm average and final exam grade, the better score will receive a weight of .50, while the worse score will receive a weight of .20.
Letter grades for the course will be determined by students’ relative overall numerical scores for the course. Specifically, grades will be based on the following scale, although I reserve the right to be more generous if appropriate:

- A: Top 20%
- B: Next 20%
- C: Next 40%
- D, F: Bottom 20%

**Note:** There will be no extra credit of any kind offered to any student under any circumstances

**EXAM SCHEDULE:**

Exams are scheduled as follows. If you take this class, you must take the exams at the scheduled times, unless you have a university sanctioned schedule conflict. If you won’t be available to take the exams at the scheduled times, don’t take this class. There will be **no makeup exams** offered to students who miss exams without prior authorization!

- Exam 1: Friday, September 26th
- Exam 2: Friday, October 31st
- Final Exam: Friday, December 12th at 12:00

**LATE HOMEWORK:**

In order to encourage timely submission of homework, late homework will be penalized as follows.

- Assignments submitted after the deadline (including after class on the due date), but within 3 days of the deadline will lose 50% of their value.

- Assignments submitted more than 3 days late will receive a zero.
ACADEMIC DISHONESTY:

I will not tolerate cheating of any kind. Although you are free to work with other students on your homework assignments, you will be expected to complete your exams without assistance from anyone (or anything) else. Any student who, in my judgment, is found to have cheated on an exam will receive an automatic zero for that exam.

ACCOMMODATING DISABILITIES:

In keeping with the Americans with Disabilities Act, I will make every effort to accommodate the needs of students with disabilities. Any student who, because of a disabling condition, may require some special arrangements in order to meet course requirements should contact me as soon as possible to make necessary accommodations.

DROP/ADD DEADLINES:

- Tuesday, September 2nd – Last day to add courses without special permission, or drop courses with a full refund
- Friday, September 19th – Last day to withdraw from the University with a 25% refund
- Monday, November 3rd – Last day to drop a course or withdraw from the University
