Exam 1
Trigonometry

## Important Rules:

1. Unless otherwise mentioned, to receive full credit you MUST SHOW ALL YOUR WORK. Answers which are not supported by work might receive no credit.
2. Turn off your cell phone at the beginning of the exam and place it in your bag, NOT in your pocket.
3. No calculators, of any kind, are allowed. Any other electronic devices, notes, texts or formula sheets are also not allowed. Concentrate on your own exam. Do not look at your neighbor's paper or try to communicate with your neighbor.

Problems 1 through 6 of the exam are multiple choice. Please circle the correct answer and give a brief justification of your answer. In each case, 3 pts for answer, 3 pts for justification.

1. Find the reference angle of $550^{\circ}$.

## Justification:

A. $360^{\circ}$
B. $50^{\circ}$
C. $10^{\circ}$
D. $80^{\circ}$
E. None of the above
2. Convert $\frac{5 \pi}{12}$ to degrees.

## Justification:

A. $75^{\circ}$
B. $150^{\circ}$
C. $60^{\circ}$
D. $50^{\circ}$
E. None of the above
3. Find the length of an arc of a circle of radius 6 meters formed by a central angle of $100^{\circ}$.

Justification:
A. 600 meters
B. $20 \pi$ meters
C. $36 \pi$ meters
D. $100 \pi$ meters
E. None of the above
4. Find the exact value of

$$
\cot 40^{\circ}-\frac{\sin 50^{\circ}}{\sin 40^{\circ}}
$$

## Justification :

A. 0
B. 1
C. -1
D. 2
E. None of the above
5. State the domain of the function $f(x)=\sec x$.

## Justification:

A. All real numbers
B. $[-1,1]$
C. All real numbers except integer multiples of $\pi$
D. All real numbers except odd integer multiples of $\pi / 2$
E. None of the above
6. Find the phase shift of the function $f(x)=2 \sin (2 \pi x-4)+4$.

Justification:
A. -4
B. 4
C. $2 \pi$
D. 2
E. None of the above
7. (12 pts) Find the exact value of each of the following. Specify if the expression is undefined. $\sin \left(90^{\circ}\right)=$

$$
\cos (7 \pi / 6)=
$$

$\cos (\pi)=$

$$
\cot \left(135^{\circ}\right)=
$$

$\sec (-2 \pi / 3)=$

$$
\tan (11 \pi / 2)=
$$

8. (16 pts) (a) ( 8 pts ) Given that $\theta$ is an acute angle and that $\cos (\theta)=\frac{2}{3}$, find the exact value of
$\sin (\theta)=$
$\tan (\theta)=$
$\csc (\theta)=$
(b) ( 8 pts ) Given that $\theta$ is an angle in the 3 rd quadrant and that $\tan (\theta)=\frac{4}{3}$, find the exact value of
$\sin (\theta)=$
$\cos (\theta)=$
$\cot (\theta)=$
9. ( 8 pts ) Find the value(s) of $\theta, 0 \leq \theta \leq 2 \pi$, so that $\cos \theta=-\frac{\sqrt{3}}{2}$.
10. (18 pts) Due to tide, the height of the water, $H$, in feet, at a boat deck $t$ hours after 6 A.M. is given by

$$
H(t)=10+4 \sin \left(\frac{\pi}{6} t\right)
$$

(a) ( 6 pts ) What is the maximum height of the water (high tide), what is the minimum height of the water (low tide)?
(b) (6 pts) What is the period of this function and what does this say about the tide?
(b) (6 pts) At what time(s) during the day does the low tide occur?
11. (10 pts) Graph two cycles of $y=\tan (x / 3)$.
12. (10 pts) Chose ONE.
(a) State and prove the Pythagorean relation between $\sec \theta$ and $\tan \theta$. (You may use without proof the Pythagorean relation between $\sin \theta$ and $\cos \theta$.)
(b) State and prove the formula for the area of a sector of a circle of radius $r$ and of angle $\theta$ radians. (You may use without proof the formula for the area of a circle.)
