READ ME FIRST: Show all essential work very neatly. Use correct notation when presenting your computations and arguments. Write using complete sentences. Remember this: "=" denotes "equals", "\(\Rightarrow\)" denotes "implies", and "\(\Rightarrow\)" denotes "is equivalent to". Since the answer consists of all the magic transformations, do not "box" your final results. Communicate. Show me all the magic on the page, for I do not read minds. Eschew obfuscation.

1. (5 pts.) Evaluate the following using the 1st Part of the Fundamental Theorem of Calculus.

$$\int_{1}^{9} \frac{1}{x\sqrt{x}} dx =$$

2. (5 pts.) Using a complete sentence and appropriate notation, state precisely the First Part of the Fundamental Theorem of Calculus. [This is sometimes called the *Evaluation Theorem*.]

3. (5 pts.) Express the following sum using sigma notation, but do not attempt to find its numerical value.

$$-\frac{1}{2} + \frac{1}{4} - \frac{1}{6} + \frac{1}{8} - \frac{1}{10} + \frac{1}{12} =$$

4. (5 pts.) Obtain the upper limit of summation and rewrite the summand in order to make the following equation true. Do not attempt to evaluate the sum.

$$\sum_{k=8}^{45} 2^{3k} = \sum_{j=0}^{45}$$

5. (5 pts.) Express the following limit as a definite integral. Do not attempt to evaluate the integral.

$$L = \lim_{\max \Delta x_k \to 0} \sum_{k=1}^{n} (2\cos^3 x_k^*) \Delta x_k ; \quad a = -\pi, b = 2\pi.$$

L =

6. (5 pts.) Using complete sentences and appropriate notation, state the Second Part of the Fundamental Theorem of Calculus.

7. (10 pts.) Find each of the following derivatives.

(a) 
$$\frac{d}{dx} \left[ \int_{x}^{\pi} 4 \sin(t^{3}) dt \right] =$$

(b) 
$$\frac{d}{dx} \left[ \int_{-1}^{x^2} \sqrt{t+1} \ dt \right] =$$

- 8. (5 pts.) (a) (3 pts.) Give the definition of the function ln(x) in terms of a definite integral and give its domain and range. Label correctly. (**Hint**: To start, complete the sentence, "ln(x) = ...")
- (b) (2 pts.) Given ln(a) = 4 and ln(b) = -3, evaluate the following integral.

$$\int_{1}^{ab^2} \frac{1}{t} dt =$$

9. (5 pts.) Write the solution to the following initial value problem in terms of a definite integral taken with respect to the variable  $\mathbf{t}$ , so the differential denoting the variable of integration is  $d\mathbf{t}$ . DO NOT ATTEMPT TO EVALUATE THE DEFINITE INTEGRAL IN t THAT YOU OBTAIN.

$$\frac{dy}{dx} = 4e^{x^2}, \quad y(\pi/4) = 1.$$

$$y(x) =$$

10. (5 pts.) Evaluate the definite integral below by expressing it in terms of u correctly and then evaluating the resulting integral using a formula from geometry.

$$\int_{1}^{e^{4}} \frac{\sqrt{16 - (\ln(x))^{2}}}{x} dx ; u = \ln(x)$$

$$\int_{1}^{e^{4}} \frac{\sqrt{16 - (\ln(x))^{2}}}{x} dx =$$

11. (10 pts.) Write each of the following two sums in closed form.

(a) 
$$\sum_{k=1}^{n} \left( \frac{1}{k+1} - \frac{1}{k+2} \right) =$$

$$(b) \quad \sum_{k=0}^{100} \left( \frac{1}{5^k} \right) =$$

12. (10 pts.) If the function f is continuous on [a,b], then the net signed area A between y = f(x) and the interval [a,b] is defined by

$$A = \lim_{n \to \infty} \sum_{k=1}^{n} f(x_k^*) \Delta x.$$

Reveal all the details in computing the numerical value of the net signed area of  $f(x) = 4x^3$  over the interval [0,1] using only the definition above with

$$X_k^*$$

the right end point of each subinterval in the regular partition. Do not use the Fundamental Theorem, Part 1.

13. (10 pts.) A particle moves with a velocity of  $v(t) = 2\cos(2t)$  along an s-axis. Find the displacement and total distance traveled over the time interval  $[\pi/2, 3\pi/4]$ .

Displacement =

Total\_Distance =

14. (5 pts.) Evaluate the following limit:

$$L = \lim_{x \to 0} (1 + x)^{1/(3x)} =$$

15. (10 pts.) Let the function g be defined by the equation

$$g(x) = \int_0^x e^{t^2} dt - 5x$$

for  $x \in (-\infty, \infty)$ . Then

- (a) g(0) =
- (b) g'(0) =
- (c) g''(0) =
- (d) Determine the open intervals where g is increasing or decreasing. Be specific.
- (e) Determine the open intervals where g is concave up or concave down. Be specific.

Silly 10 Point Bonus: Reveal the magic in evaluating the following limit:

$$\lim_{x \to 0^{-}} \frac{1}{x} \int_{-x}^{x} \frac{\sec(t)}{\pi^{2} + t^{4}} dt$$

[Say where your work is, for it won't fit here.]
