

Exam1Review

Tuesday, May 23, 2023

- Identify SI units of given physical quantity
check whether it is fundamental or derived
- Calculate units of coefficients in the equation
- Calculate distance, displacement, average velocity, speed
- Problem in which ball is thrown upward with some initial velocity

- Acceleration for two dimensional motion
about car moving in different directions
- Projectile motion, example discussed in the class

- Equilibrium Problems

and

- Non Equilibrium Problem

- Work for 2d motion

— Conservation of Mechanical Energy

— Center of mass of the system

— Momentum Conservation
